Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claim 5 is objected to because of the following informalities: Line 3 contains a misspelled word: "com" should be --cam--. ***. Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Froment US 6,189,509. The reference discloses a fuel injection system of an internal combustion engine, the system comprising at least one local cam [sic] driven pump element (3) per engine cylinder, associated with each injector (4), of a unit fuel injector or a pump-line-nozzle system for compressing the fuel, a supply line from the pump element supplying fuel to the injector (4), the injector and/or the supply line to the injector forming a local pressure reservoir chamber (7), a check valve (6) integrated into the supply line from the pump element to the injector, and a throttle (shown above holding valve 9) for controlling the pressure decrease of a nozzle chamber of the

injector. Check valves arranged in parallel with throttles are well known in fuel systems and their functions are well understood.

3. Regarding claim 6, note the throttle is connected in parallel to the check valve
- (6). Regarding claim 8, note valve unit 22.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited art showing throttles and check valves within the fuel lines and note their function.
